Introduction

An intractable scientific enigma

Understanding the human brain is one of the greatest challenges facing 21st century science.

If we can rise to it, we can gain profound insights into **what makes us human**, build revolutionary **computing technologies** and develop new treatments for **brain disorders**.

Today, for the first time, modern ICT has brought these goals within reach.

An intractable scientific enigma

The human brain consists of approximately **86 billions of nerve cells and 100 trillion synapses** that form local and global brain networks.

These networks respond in milliseconds, but also change slowly, e.g., during the course of a day, and over the months and years in the lifespan of a person.

<https://fz-juelich.sciebo.de/s/Gjk9rBgKK2nIO2i>

An intractable scientific enigma

Our computing technologies
are inefficient compared to the
brain: the human brain
consumes only 30W of
energy...

We have not enough
supercomputing power
today to simulate large
parts of the human
brain

An intractable scientific enigma

The Human Brain Project (HBP) is a major European scientific research initiative to improve our understanding of the brain and the role it plays in making us human, and to exploit the opportunities offered by the resulting knowledge.

An intractable scientific enigma

The HBP is one of several brain research initiatives and projects around the world, but it is unique in a number of ways.

Only the HBP has an explicit focus on both **neuroscience** and **computing**. It is also the broadest and most integrated brain initiative, and the only one aiming to build a research infrastructure to accelerate brain research.

An intractable scientific enigma

Understanding the **multilevel organization of the brain** requires bridging the **different scales in time and space**

This challenge is so extraordinary that not the even best-funded single research project could claim to provide the full picture

Molecular level

Cellular level

Circuits level

Regions level

Whole organ

How to manage and process large volume of data at different levels?

The Human Brain at Multiple Levels

NEUROSCIENCE

ETHICS & SOCIETY

How to get access to multi-level brain organization?

Multiscale in space and time, multimodal

RESEARCH INFRASTRUCTURE
DATA ANALYTICS & SIMULATION

The origins of HBP: a FET- Flagship

Future and Emerging Technologies

- In 2009, the EU ICT Advisory Group recommended that the EC implement a new funding scheme to make Europe a major player in **BIG, HIGH-RISK, FOCUSED RESEARCH PROJECTS IN ICT**
- As the result of a competitive call for proposals, **23 proposals were submitted in December 2010.**
- In March 2011, **six candidates were selected for a pilot phase** for writing a full proposal – and two were finally selected in January 2013.
- **Submitted Proposals:**
 - 1) FuturICT – Knowledge Accelerator and Crisis-Relief System
 - 2) Graphene Science and technology for ICT and beyond**
 - 3) Guardian Angels for a Smarter Planet
 - 4) The Human Brain Project**
 - 5) ITFoM: The IT Future of Medicine
 - 6) RoboCom: Robot Companions for Citizens
- HBP started on **1 October 2013.**

https://www.humanbrainproject.eu/documents/10180/17648/TheHBPreport_LR.pdf

The origins of HBP: a FET- Flagship

After a long selection process the EC selected in 2013 two large Flagship projects

Graphene project

Human Brain Project (HBP)

**Goal: ~ €100 million / year (EC + MS)
during a long period of time (~10 years)**

The origins of HBP: a FET- Flagship

- **Bigger:** 116 Partners (typical EU project 5-10 Partners)
- **Richer:** €45 million/year (typical EU project €1-10 million/year)
- **Longer:** 10 years (typical EU project 1-2 years)
- **More complex:** 12 Subprojects (each size of typical EU project)
- **Broader:** computer science, neuroscience, medicine & many more
- **Well-justified:** progress review each year, new contract every 2 years

HBP phases

Other Brain research initiatives

- International Brain Initiative IBI
- Jointly announced in Dec 2017 by five large-scale national brain research projects in the “Canberra Declaration”
- The initial members are:
 - Australian Brain Alliance
 - Brain/MINDS project Japan
 - Korea Brain Initiative
 - Human Brain Project (EU)
 - BRAIN Initiative (USA)

Project structure

HBP at a glance

856 full-time research
and staff positions

Over 700 scientific
publications

31% positions filled by
women

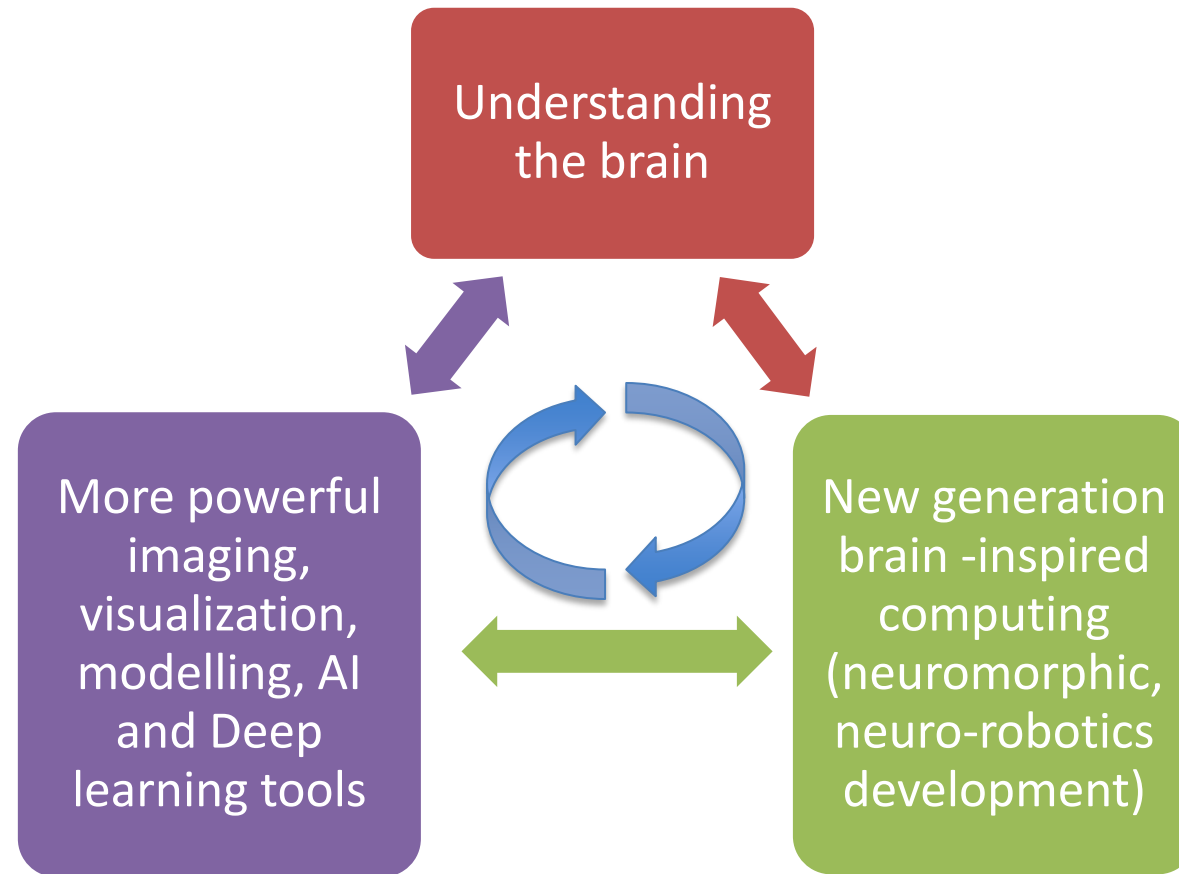

Funding Estimate 2013-2023:
EU → EUR 406 million
National → EUR 600 million

Embedded in previous and existing national and international initiatives: Blue Brain, BrainScaleS, Supercomputing and Modeling the Human Brain, SpiNNaker, PRACE (Partnership for Advanced Computing in Europe), etc.

Understanding HBP

A win-win situation of collaboration between Neuroscience and HPC

HBP structure

SUBPROJECTS

There are **12 Subprojects** in the HBPs that span the development of **6 ICT-based Platforms**, as well as data gathering, cognitive and theoretical neuroscience, ethics, and administrative services.

CO-DESIGN PROJECTS

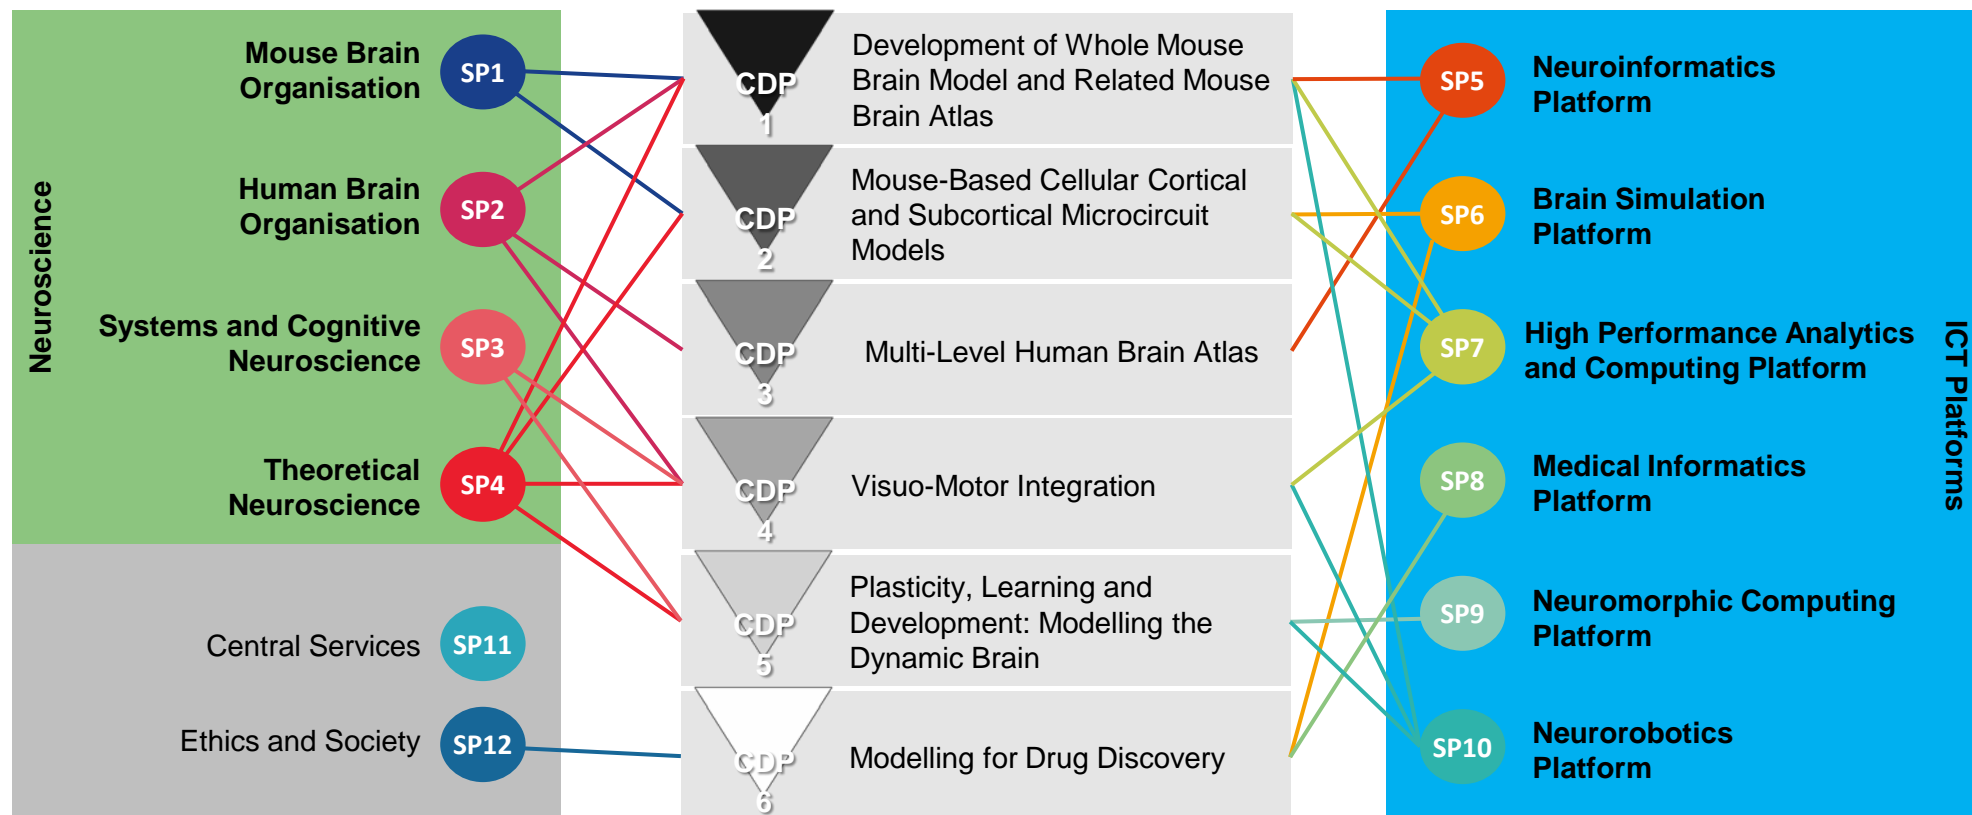

Co-design projects are multi-disciplinary and cross Subprojects. They are led by senior scientists from the HBP and are designed around **collaboration, data gathering and simulation between the HBP's Platforms**.

PARTNERING PROJECTS

Partnering Projects create synergies between the core HBP and activities receiving funding at regional, national or transnational level. The projects and their partners already **have their own funding** and join with the HBP to together make a new and significant contribution to the HBP's strategic research roadmap

Subprojects (SP) and co-Design Projects (CDP)

Towards a Research Infrastructure

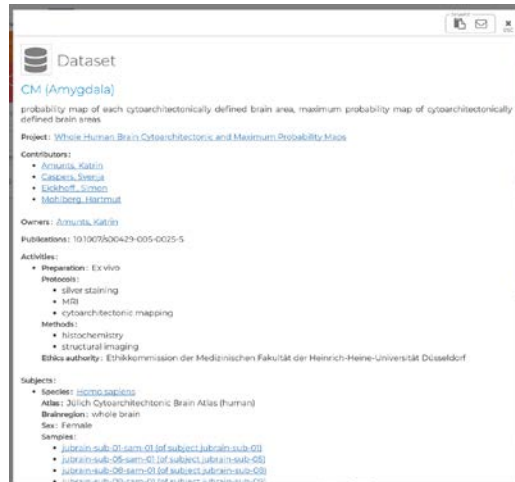

- HBP unmatched computational resources
- The HBP Platform ecosystem
- HBP Joint platform
- HBP Research infrastructure

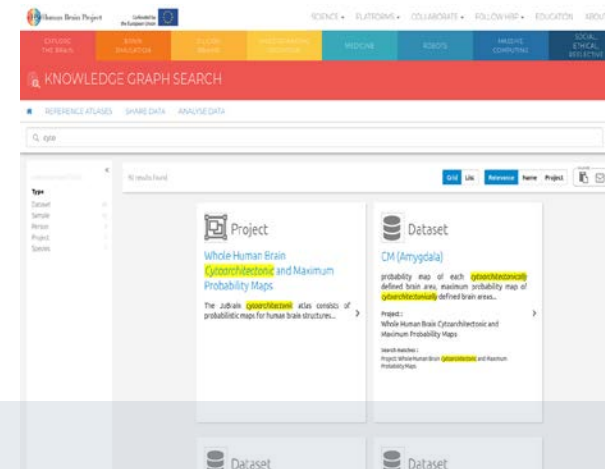

NEUROINFORMATICS PLATFORM

Open data = accelerated
science

- Over 8 billion euro worldwide is spent annually on Neuroscience research
- 90% is spent on new data generation

***If only 1% of this data could be reused for new science
→ Over 60 million euro in annual cost savings***

BRAIN SIMULATION PLATFORM

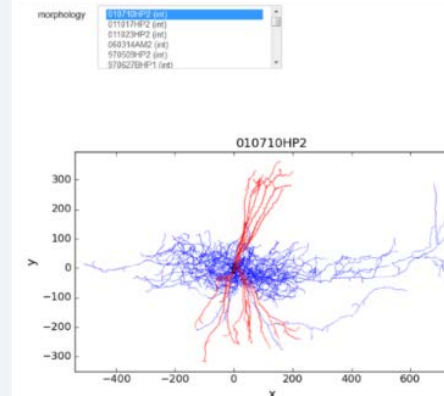

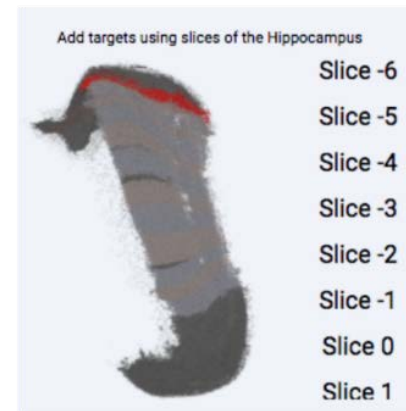

- No install required, user-centric and user-friendly
- Custom built to enable the reconstruction and simulation of models of brain and brain tissue with a data-driven approach.
- Accessible to different neuroscientific and/or technical backgrounds and expertise levels
- Use the Platform's capabilities for scientific goals and curiosity
- Explore online functionality through guided Use-case Collabs and harness the power of in-silico neuroscience

**Build, simulate and
analyze detailed models**

HIGH PERFORMANCE ANALYTICS AND COMPUTING PLATFORM

Providing the supercomputer
infrastructure

The human brain is so **complex** that a normal computer is not enough to simulate even a fraction of the human brain.

HBP uses powerful computers, capable of performing quadrillions of operations per second and have memory capacity measured in quadrillions of bytes.

The Human Brain Project not only makes this hardware available to the scientists, but also develops **software** that supports neuroscientists in their work

HBP **neuroscientists** collect a lot of data, then **develop brain models** based on this data and finally simulate these models

MEDICAL INFORMATICS PLATFORM

Helping EU patients beyond drugs

Medical challenges

Improved prevention
More precise and timely diagnosis
More performant treatment decision-making
More effective neuro-rehabilitation
More shared knowledge about brain diseases
More shared knowledge about clinical practice
More efficient clinical studies

Facilitators

- More predictive & validated biomarkers
- AI-based diagnostic & decision making tools
- Open-access big research & clinical data
- GDPR compliant interoperability
- Scaled-up clinical/research EU network
- Mobile health technologies
- *Other Neurotechnologies (VR, Brain Computer interf, ...)*

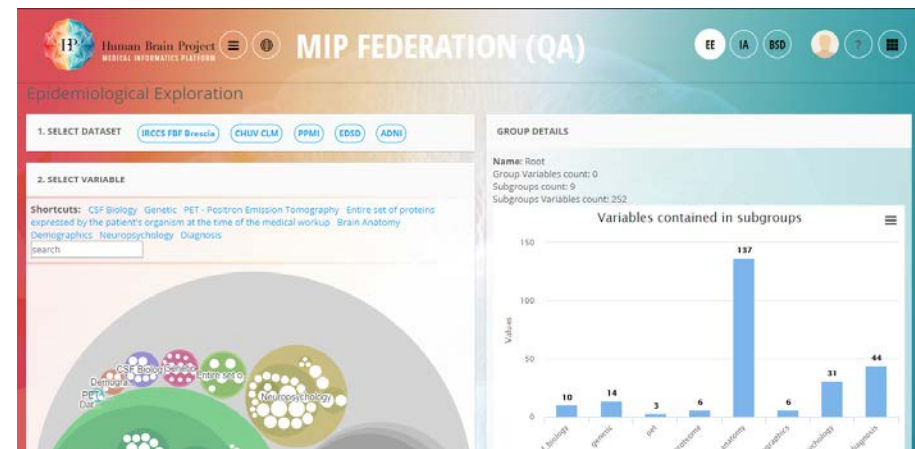

Anonymized, privacy sensitive queries

No data leaves the hospital
GDPR compliant

Machine and deep learning models with deep data access

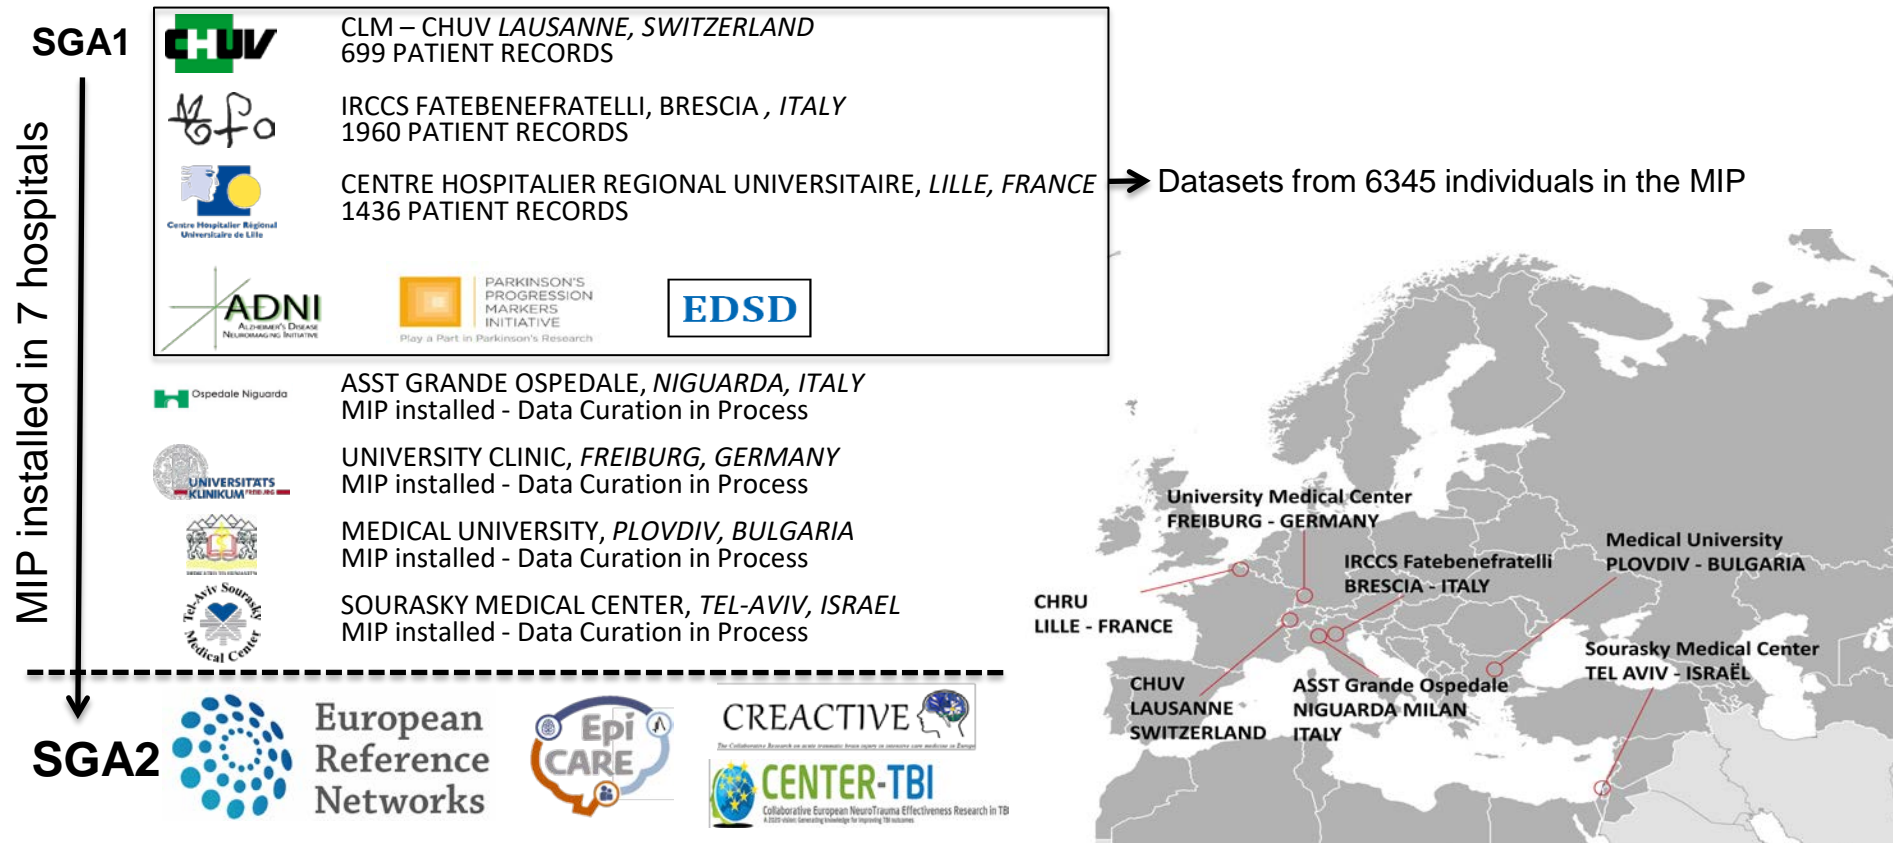

No data leaves the hospital
GDPR compliant

MEDICAL INFORMATICS PLATFORM (CONT'D)

MIP offers a unique
interoperability solution

NEUROMORPHIC COMPUTING PLATFORM

Brain-like inspired computation

A better understanding of the functioning of the brain paves the way to **neuromorphic computing**, which promises to enhance traditional supercomputers with processors built on radically new approaches, based on **interconnected artificial neurons** or on **digital representations of neurons**.

Neuromorphic computing will be key in developing the next generation of **extreme-scale computing**, i.e., modular supercomputing.

In the medium term we may expect neuromorphic technologies to deliver a range of applications more efficiently than conventional computers, for example to deliver **speech** and **image recognition** capabilities in smart phones.

In the long term there is the prospect of using neuromorphic technology to integrate energy-efficient intelligent cognitive functions into a wide range of consumer and business products, from **driverless cars** to **domestic robots**.

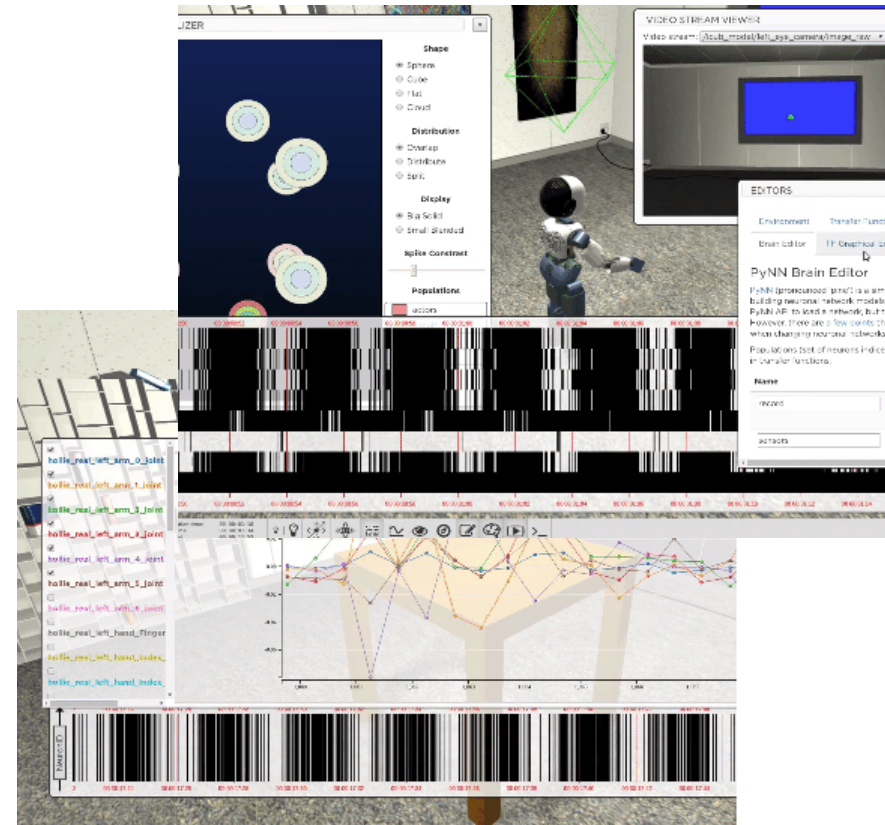

NEUROROBOTICS PLATFORM

- Run simulations from anywhere without any installation
- Choose from the predefined robot models and environments to then edit them and the brain models you use as controllers.
- Desktop version for offline experimentation
- Connect your brain models to 3D bodies and let it explore one of our many simulation environments that you can customize with our environment designer

A key platform for the development of therapeutic experiments and robotics capabilities in HBP

Simulation environments to build better robots

Towards a Research infrastructure that supports Science, Technology, Innovation and Medical impact

The focus now is to **further progress the base infrastructure** and **connect the platforms** into a high-level infrastructure

EBRAINS

Innovation in HBP

The Innovation and Technology transfer Node of HBP

Universidad Politécnica de Madrid

The objective of the ITTN is to offer a set of innovation and technology transfer services for the whole HBP community and to accelerate its impact in society.

1. Identifying **emerging brain technologies** with market potential
2. Performing **technology and market watch reports**
3. Supporting the evolution of **prototypes** into industrial proofs of concept to bring TRLs closer to international markets
4. Training people on brain **innovation and technology transfer**
5. Promoting the creation and scale-up of **start-ups** on brain technologies
6. Helping the creation of **INDUSTRIAL HUBS** in participating countries.

The Innovation and Technology transfer Node of HBP

DO YOU WISH TO BE A MEMBER OF OUR INDUSTRIAL HUBS?

We are selecting **members** to participate in our **National Hubs for Innovation (NHI)**

Hub members will have fluent **access** to relevant HBP **knowledge** and will be early informed on new **HBP technologies**

Through NHIs HBP offers industries a real opportunity to capture **early research results** in Neuroscience, Computing and Brain medicine

HBP NATIONAL HUBS FOR INNOVATION

***HBP-NHIs** are conceived as voluntary associations of national industries (with or without legal personality) created at national level but coordinated at European level by the HBP ITTN as a bridge between the HBP consortium and firms' interests.*

HBP NATIONAL HUBS FOR INNOVATION

Progressive launching of National Hubs in the main countries participating in HBP

HBP NATIONAL HUBS FOR INNOVATION

OBJECTIVES

Facilitate the access to HBP technologies and platforms to industries participating in industrial hubs

- To **disseminate** within the industry members of each NHI information of **knowledge and technology** generated in HBP with potential industrial interest.
- To facilitate the **early access to HBP platforms** to test the applicability of their embedded tools in industrial settings

HBP NATIONAL HUBS FOR INNOVATION OBJECTIVES

Industrial influence on the future direction of HBP objectives

- To identify **scientific and technological areas** with potential industrial interest at national level.
- To identify **possible innovation projects**
- To support the **definition of national positions** on industry interest
- To help in the definition of **complementary and partners' programmes**, or other public-private partnership schemes to support brain applied research.

WHO COULD BE A MEMBER OF A HBP NATIONAL HUBS FOR INNOVATION?

- **SMEs, start-ups, and large companies** (not belonging to the HBP consortium) are welcomed to the Hubs
- Industry **associations** are also welcomed
- Governance and operational rules are defined by a **MoU**
- Internally, each NHI can create “**groups of interest**” (as working groups on selected themes) on temporal or permanent bases.

How to engage with HBP?

If you are interested in our HBP technologies or in taking part of the HBP hubs, please do not hesitate to contact the HBP Innovation team by:

1. asking for information in this event
2. Or leaving your contact data and we will get in touch with you soon,
3. Or sending an email telling us your interest: ***innovation@humanbrainproject.eu***
