Evidence for a limit to human lifespan

Xiao Dong^{1,*}, Brandon Milholland^{1,*} & Jan Vijg^{1,2}

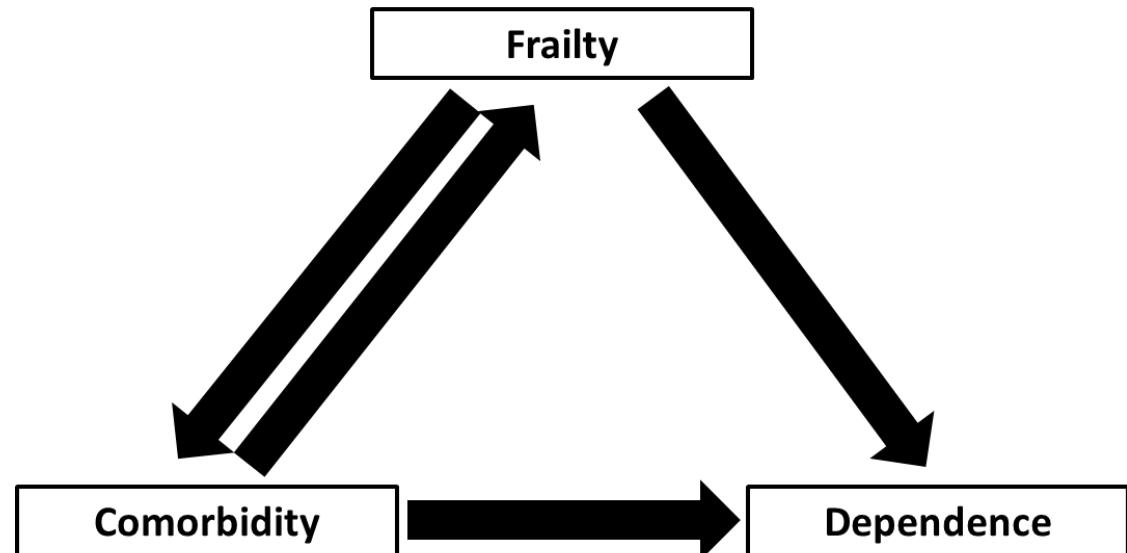

Nature, October 2016

Aging is not a disease: AGE ASSOCIATED CHANGES

DISEASE

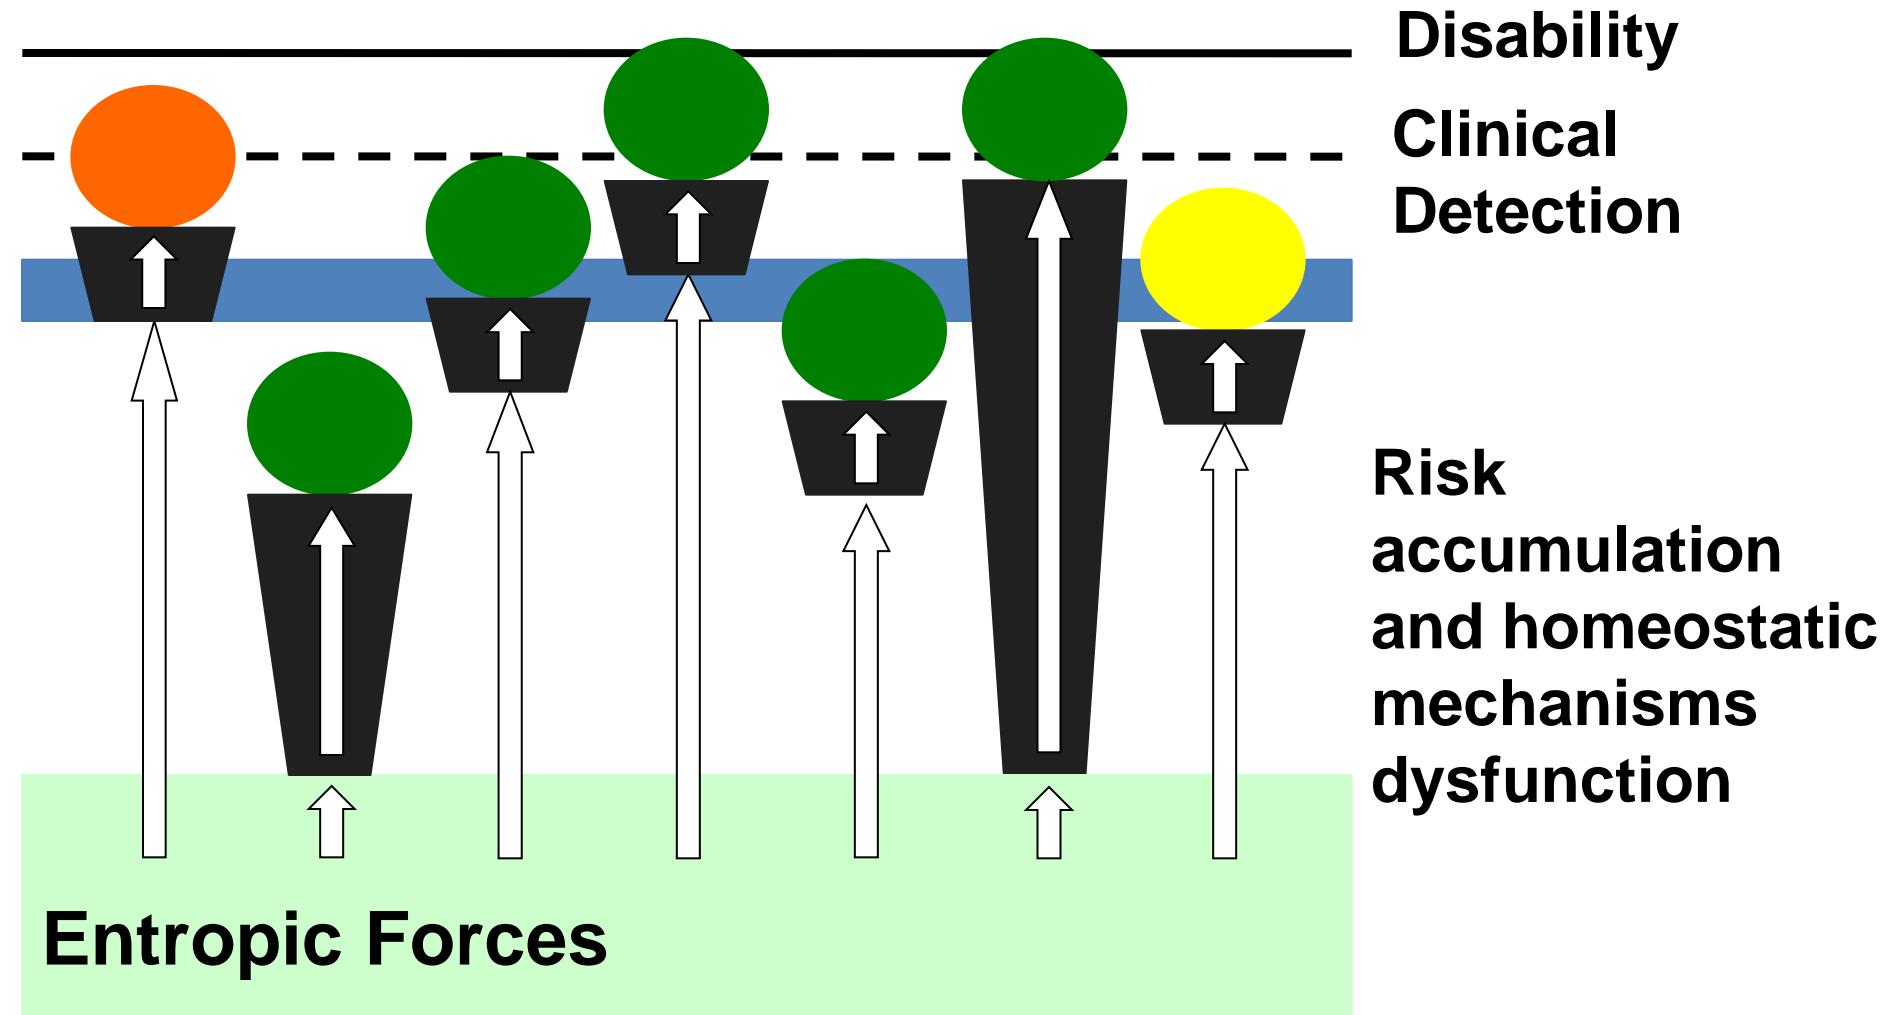

LEONARD HAYFLICK

Biological Aging Is No Longer an Unsolved Problem
Ann NY Acad Sci 2007; 1100: 1-13

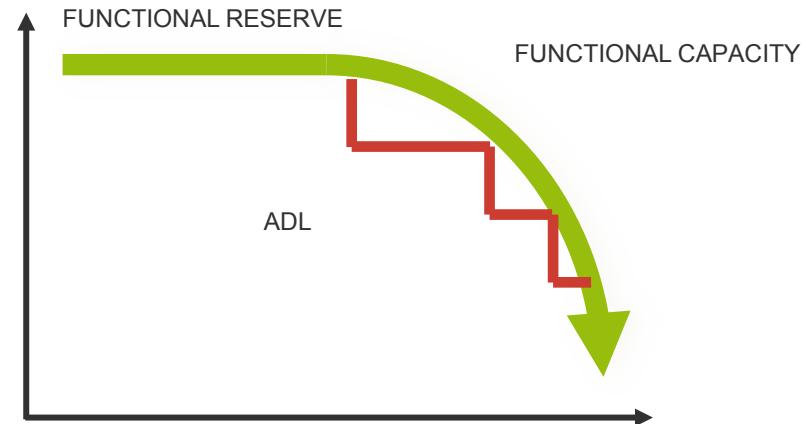

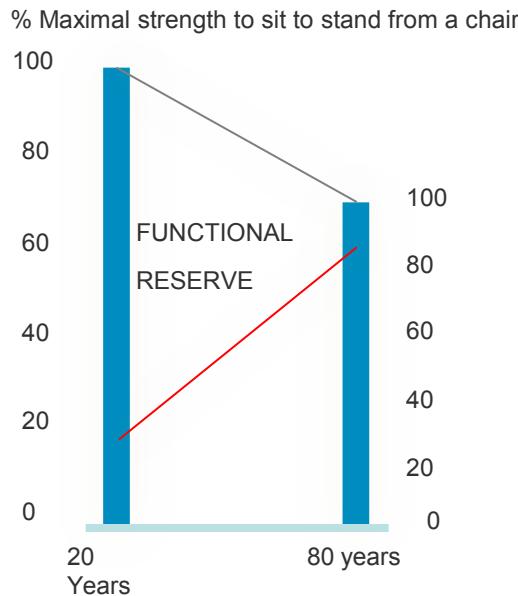

C. Age-related Frailty

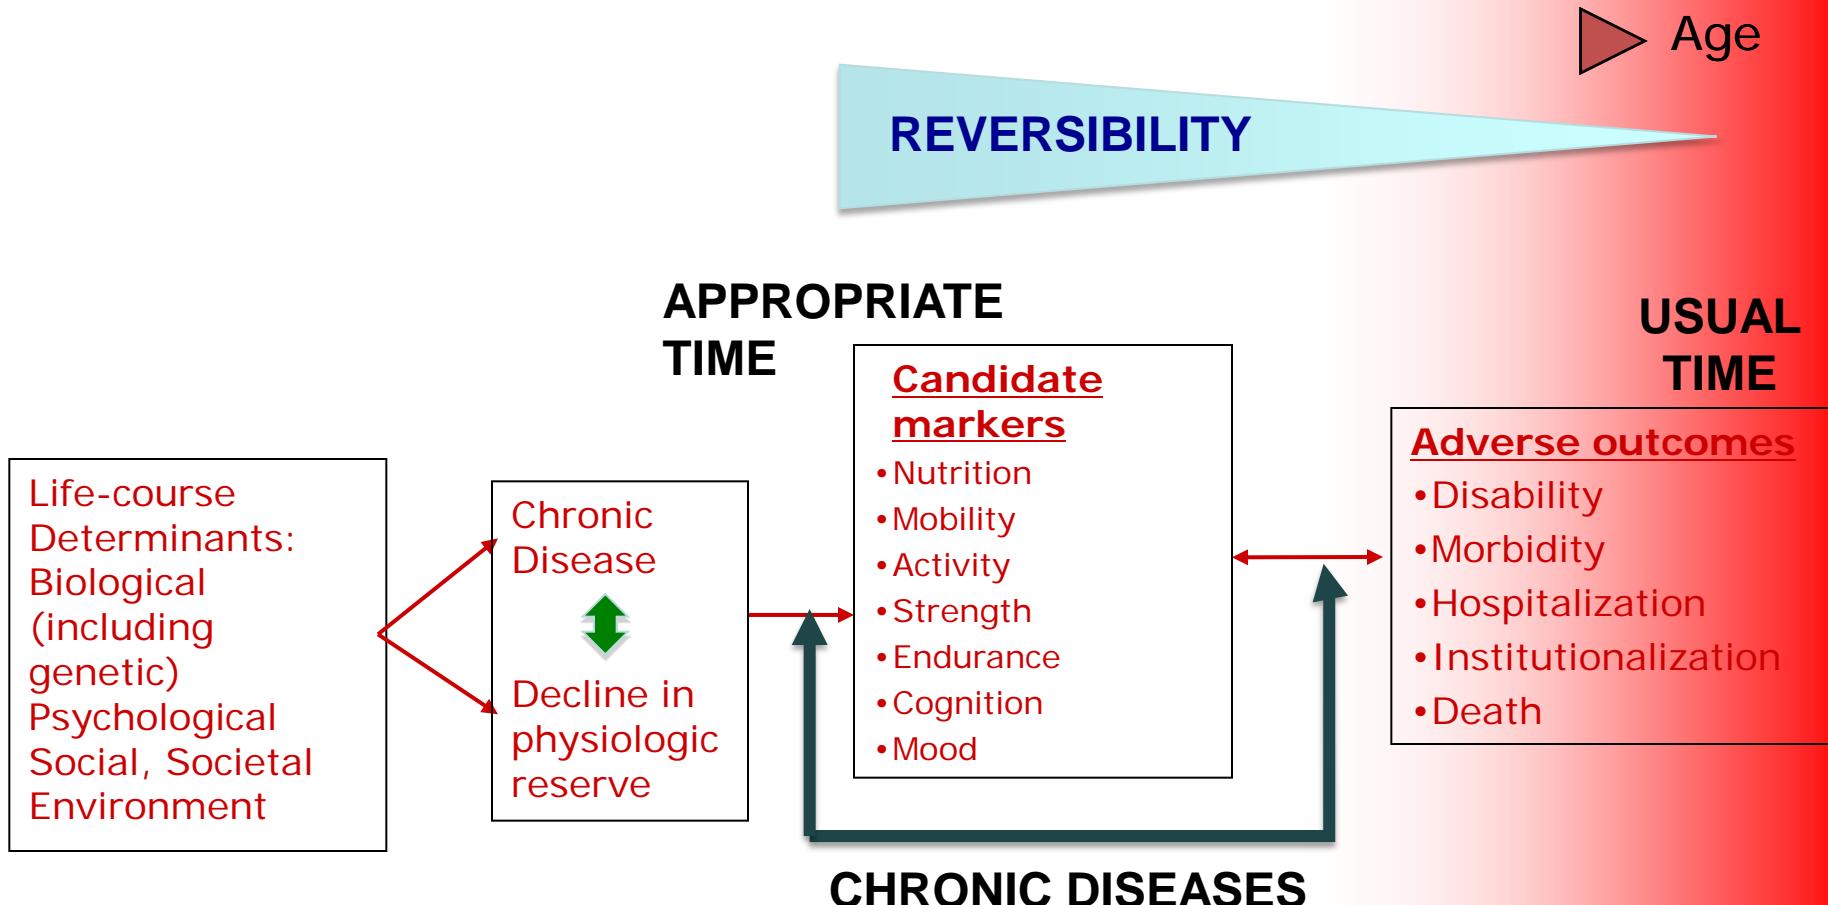

Decreased biological reserves and reduced physiologic function underlies frailty

Aging process → Significative lost of Functional Reserve and Functional Capacity

- Decrease of Functional reserve with age → plausible association with decrease of functional capacity and performance of activities of daily living
- Because **functional level** is one of the best indicators of health status, Focus should be **on functionality** and not on the diagnosis of disease when facing older frail patients

Frailty: a Complex Syndrome of Increased Vulnerability

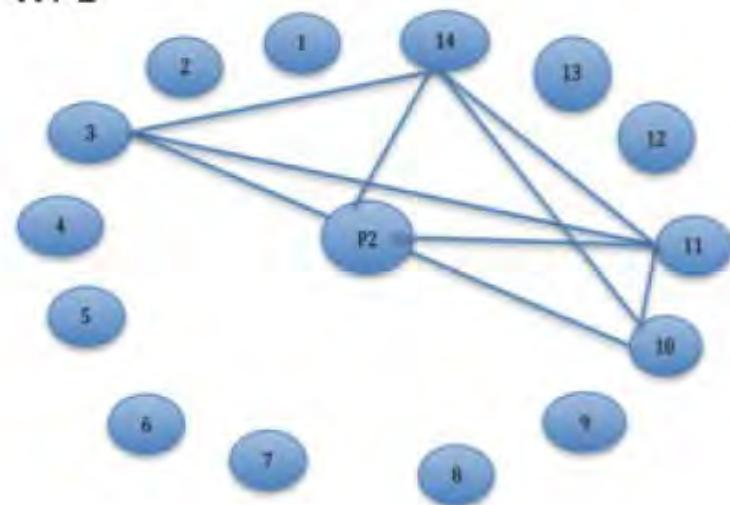

Frailty in the clinical scenario

The aim of health care has changed substantially—after centuries of trying to live longer, the time for living better has come. This change in focus has two main

Lancet, November 2014

Networking Schedule of the Work Packages

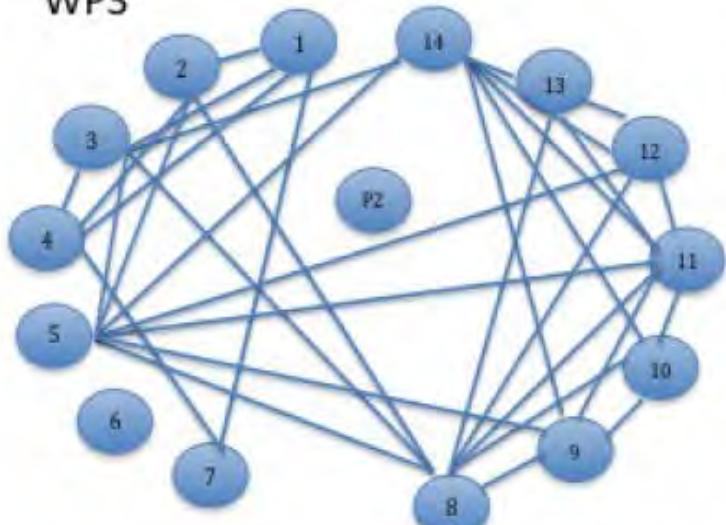

WP1

WP2

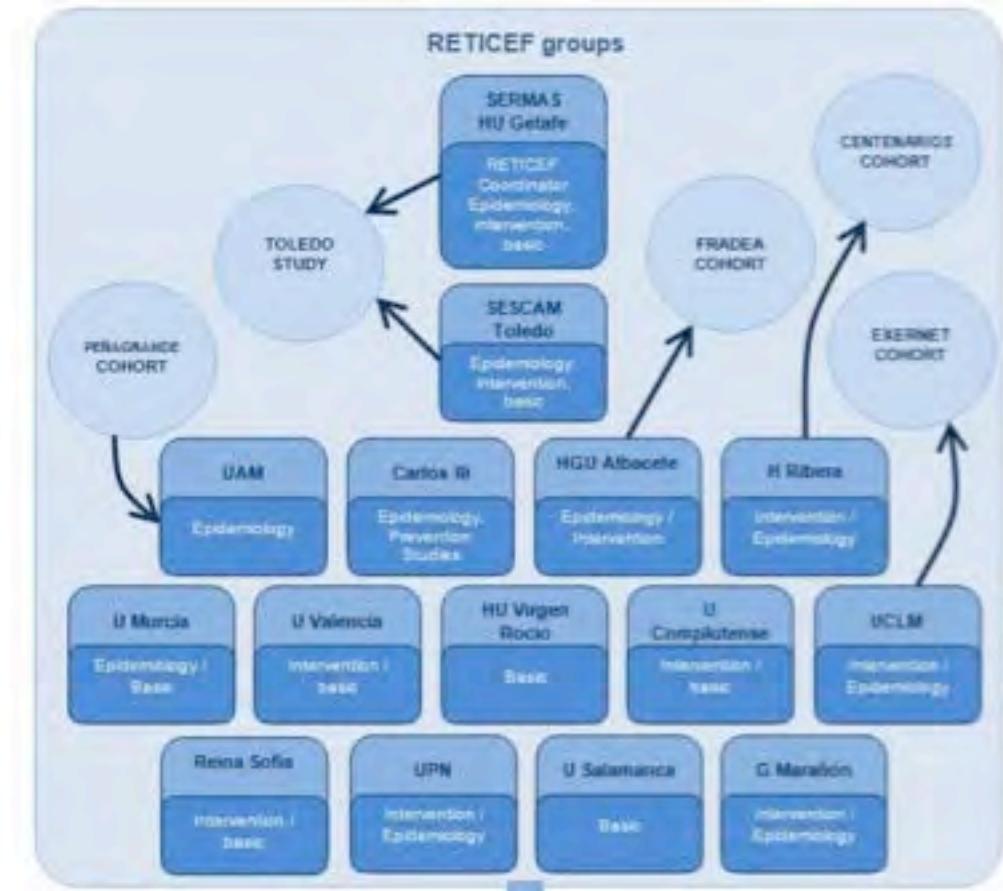

WP3

Cooperative Research Initiatives	Participant groups	Work packages
Prevalence and impact of frailty	3, 10, 11, 14	WP1
The falling person: Socio-economic, demographic and clinical determinants	6, 7	WP1, WP3
Clinical risk factors of pre-frailty and development of a predictive scale of frailty	2, 6, 7, 8, 11	WP1, WP3
Biological predictors of aging and frailty in different experimental and clinical conditions	1, 2, 3, 4, 5, 6, 7, 9, 11	WP1, WP2, WP3
Oxidative stress during aging, and their effect on bone-muscle	1, 2, 3, 4, 5, 6, 7, 8	WP2, WP3
Inflammatory response in aged and frail individuals and their impact on clinical groups	1, 2, 3, 4, 5, 6, 7	WP2, WP3
Genetic determinants of sarcopenia and osteoporosis	3, 5, 9, 10, 11, 12, 13, 14	WP2, WP3

Each number corresponds to the different participant groups in the Program 1 (see text), P2= Program 2

CONTRIBUCION ANUAL RETICEF

RED TEMÁTICA DE INVESTIGACIÓN
COOPERATIVA EN ENVEJECIMIENTO
Y FRAGILIDAD (RETICEF)

www.reticef.es

Las actividades científicas a destacar han sido : puesta en marcha y seguimiento de 3 cohortes diferentes de ancianos (Estudio Toledo de Envejecimiento Saludable, Cohorte FRADEA de Albacete y Cohorte Peñagrande en Madrid) con el objetivo principal de estudiar la fragilidad, sus condicionantes, sus bases fisiopatológicas y sus marcadores pronósticos. El número de publicaciones derivadas de esta acción alcanzan las 30. Puesta en funcionamiento de Grupo Español de Centenarios, dirigido por el Prof. J Viña con el fin de estudiar los factores asociados a la longevidad extrema.

Coordinación de 6 proyectos europeos centrados en la fragilidad (FOD-CC; MID-FRAIL; FRAILOMIC, FRAILCLINIC, FRAILTOOLS, VIVIFY), tres de ellos dentro del FP7, dos de la DG SANTE y uno dentro de la Convocatoria ERASMUS+.

Participación en el desarrollo de programas europeos dentro del European Innovation Partnership-Active Healthy Ageing y del JPI More Years Better Lives y en las Knowledge Innovation Communities con el proyecto Innolife (KIC).

Informe de evaluación de las RETICs por la Comisión Técnica de Evaluación de Redes

3. Integrar, de forma efectiva, en el funcionamiento de la red al Consejo Asesor Externo, favoreciendo sus actuaciones conjuntas y de forma planificada.
4. Establecer un sistema de información accesible, como elemento fundamental de coordinación y seguimiento del programa.
5. Mejorar las alianzas cooperativas con otras estructuras de investigación a nivel nacional e internacional.
6. **No se debiera dejar de considerar la transformación de esta red en uno o varios programas coordinados dentro de otras estructuras, si lo anterior no pudiera ser aplicable.**

Los objetivos principales del CIBER sobre Fragilidad y Envejecimiento Saludable son:

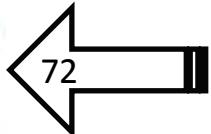

1. Evitar la discapacidad en las personas mayores, mediante el conocimiento de sus causas, mecanismos y de la efectividad de las intervenciones terapéuticas y preventivas, con especial atención a las etapas precoces de la discapacidad (fragilidad), sus factores de riesgos y sus consecuencias.
2. Proveer de evidencia experimental a la toma de decisiones sobre modelos preventivos y asistenciales

Para el logro de estos objetivos principales, se desarrollarán 3 líneas estratégicas,

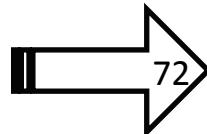

- Mecanismos biológicos del envejecimiento saludable orientado al mantenimiento de la autonomía funcional y de los mecanismos que conducen a la fragilidad y la discapacidad.
- Trayectorias funcionales y factores moduladores. Estudios de cohortes. interacción enfermedad crónica-envejecimiento-deterioro funcional
- Intervenciones preventivas y terapéuticas de la fragilidad y el deterioro funcional. análisis de eficacia, eficiencia y efectividad.

Vertebral fracture cohort study

Frailty women aged 59-70 years

The Peñagrande cohort Study

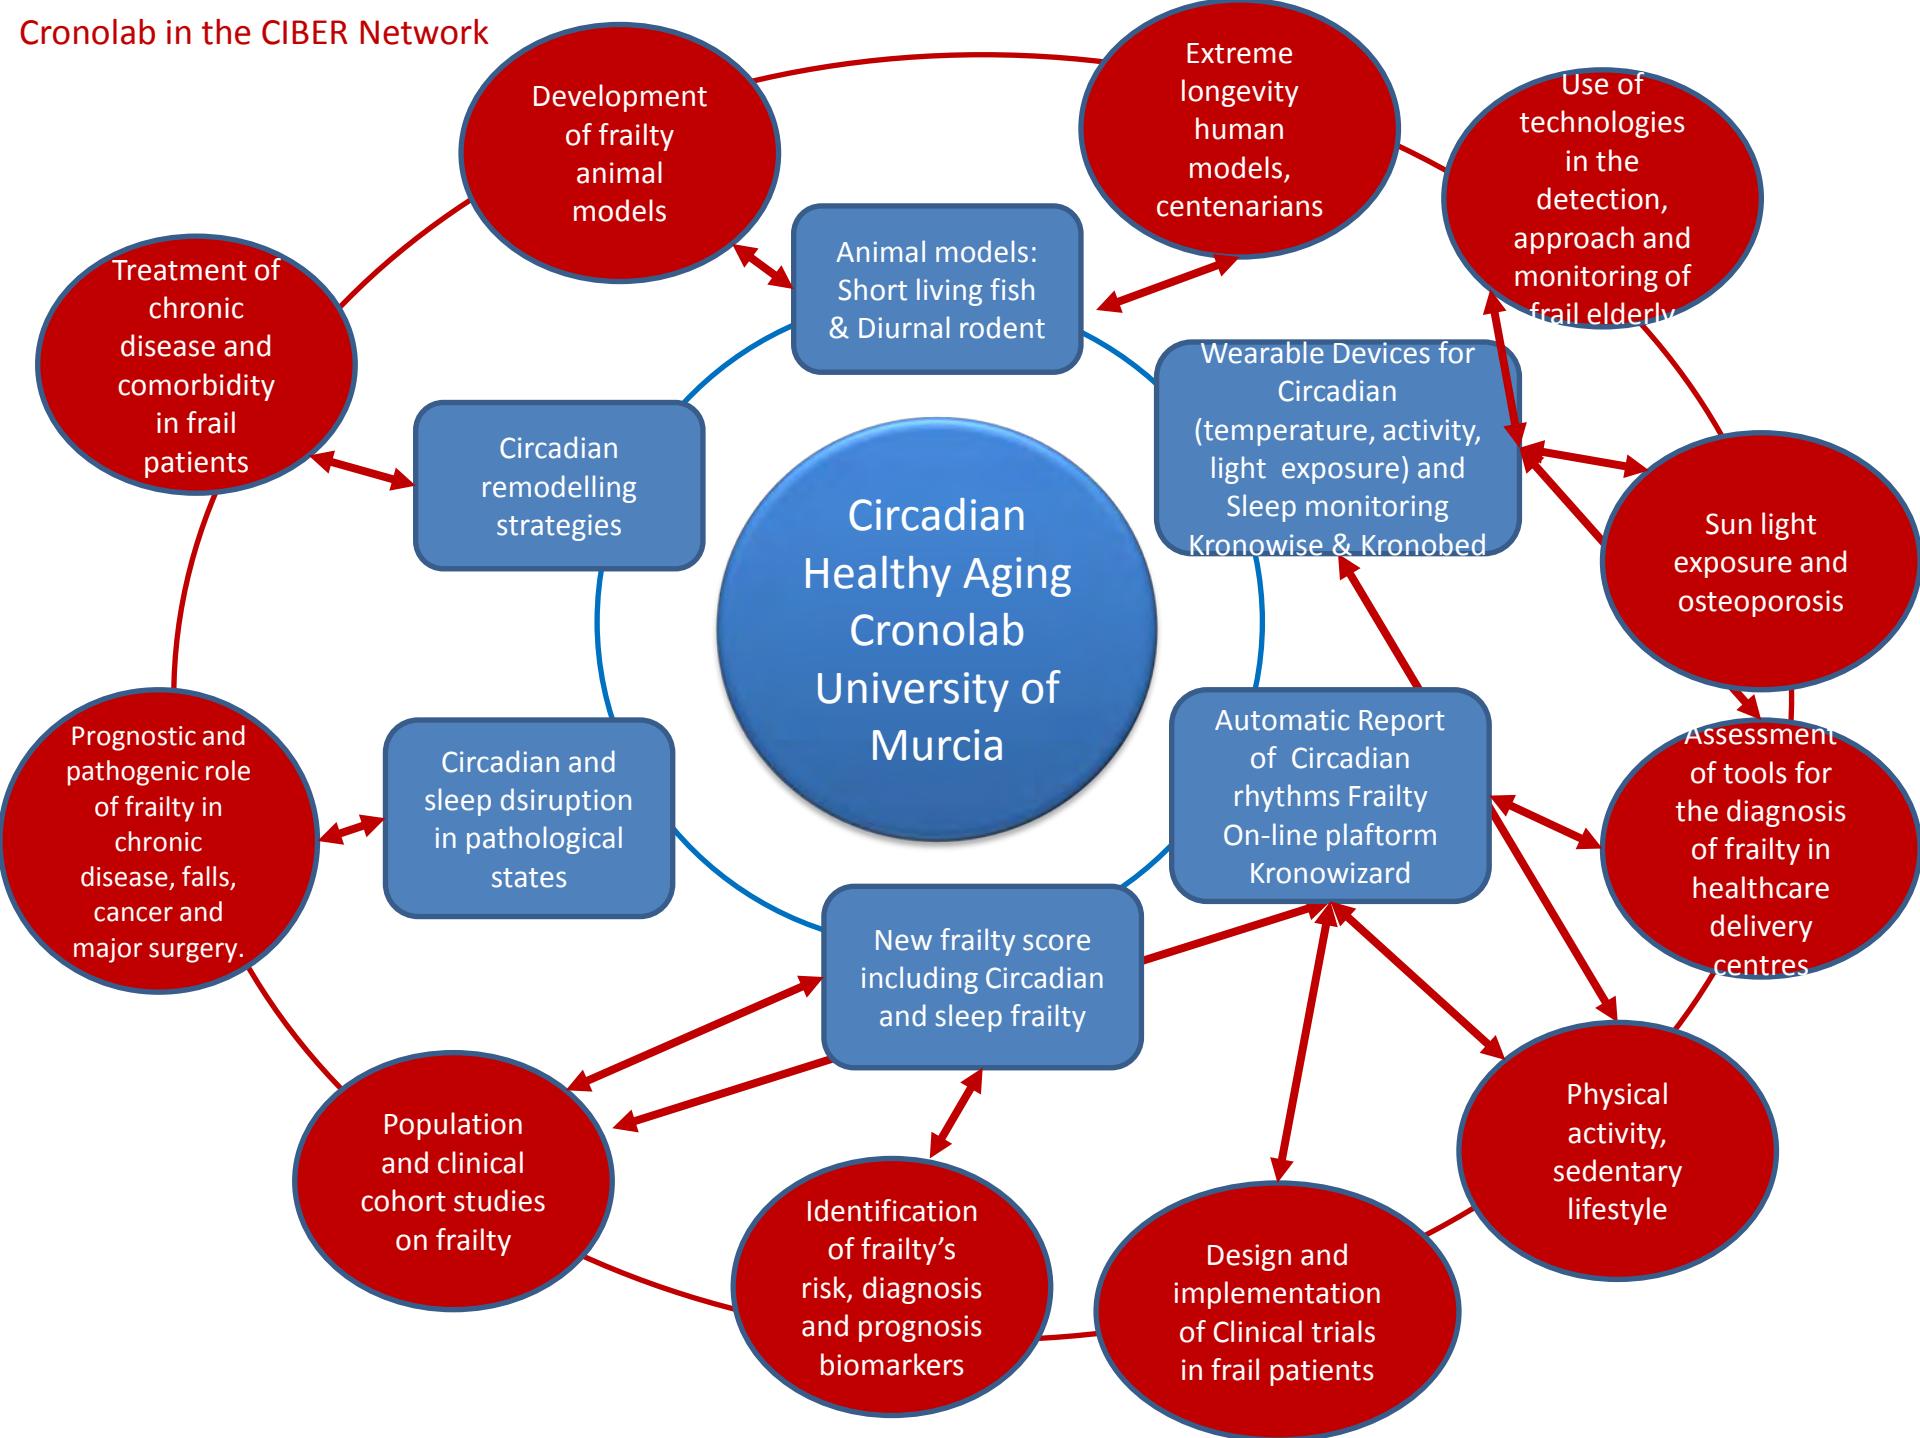

Sex and age stratified random sample of 1250 people aged >65 years living in Madrid

Our team

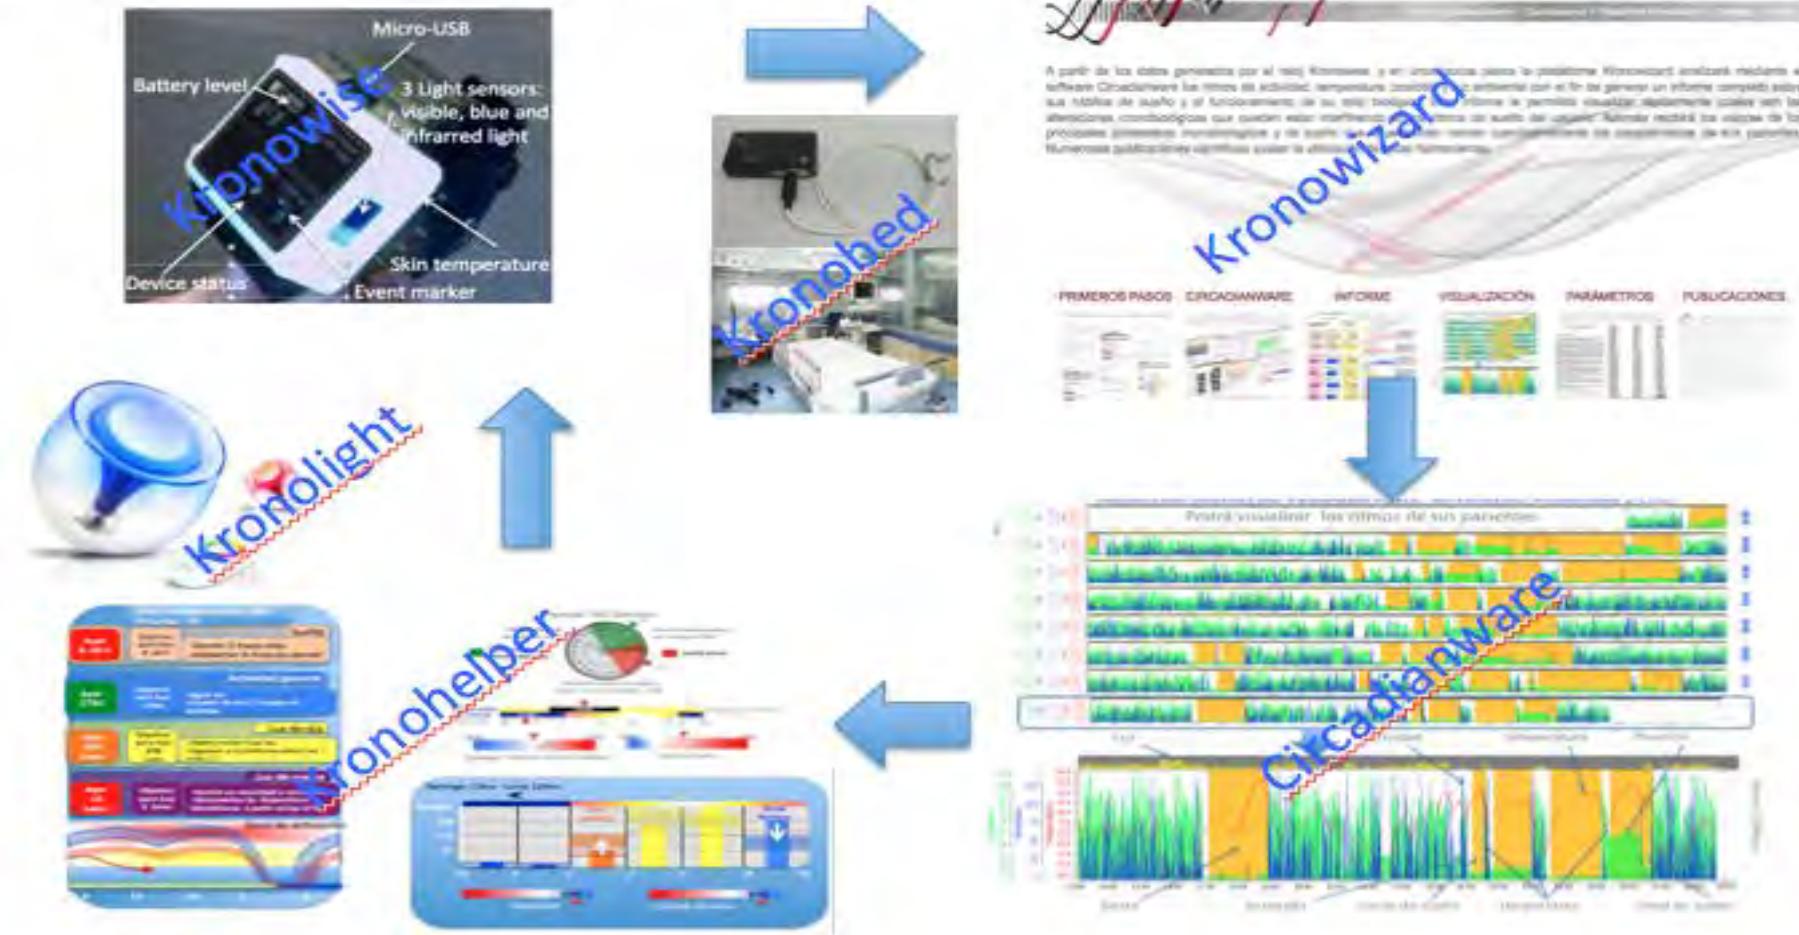

We are a multidisciplinary team focused on research on older people focused on frailty, functional decline and chronic conditions (e.g. diabetes, heart failure) through observational and interventional studies on diagnostic procedures, biomarkers, models of care and new therapeutic approaches.

DG SANCO – PUBLIC HEALTH

http://ec.europa.eu/health/index_en.htm

The screenshot shows the official website of the European Commission's Directorate General for Sanco (Public Health). The page features a blue header with the EU flag and the title "Public Health". Below the header, a navigation bar includes links for "About this site", "Contact", "Legal notice", and "English [en]". The main content area is divided into several sections:

- Latest updates:** Includes a link to the "List of eurobarometers updated" (Released 11 November 2011) and a link to the "2011 International Scientific Conference on EMF and Health, Brussels, 16-17 November 2011".
- Steering EU Public Health:** Includes links to "Health strategy", "Health programme", "Legislation", "EU in the world", "Health in all policies", and "Health and structural funds".
- Taking Action against Diseases:** Includes links to "Communicable diseases", "Vaccination", "Major and chronic diseases", and "Rare diseases".
- Ensuring health security:** Includes links to "Preparedness and response", "Blood issues and organs", and "Climate change".
- Health in Society:** Includes links to "Social determinants and health inequalities", "Ageing", "Population groups", "Interest groups", "Healthy environments", and "Screening and genetics".
- Pharmaceuticals:** Includes links to "Medicinal products for human use", "Medicinal products for veterinary use", and "International activities".
- Medical devices:** Includes a link to "Innovating technologies".

A green oval highlights the "Proposal for a regulation of the European Parliament and the Council on establishing the 3rd multi-annual programme of EU action in the field of health for the period 2014-2020" (Released 10 November 2011).

Thus, the **MAIN objective** of FRAILOMIC is to develop clinical instruments (composed by clinical BMs, -omics based laboratory BMs and classical laboratory BMs):

- » To predict the risk of frailty
- » To improve the diagnostic accuracy of frailty in day to day practice
- » To assess the prognosis of frailty in terms of disability and other adverse outcomes

In addition, the project has also three **SECONDARY objectives**:

- 1) To assess the interactions between -omic based BMs and nutrition and physical exercise (useful to know the potential response to treatments) on the natural history of frailty.
- 2) To test whether the above stated instruments are also useful for special populations: people with diabetes, obesity and people with cardiovascular disease
- 3) To test the differential validity of Fried's criteria as compared with those described in the THSA and Three-City-Bordeaux studies.
